

Programming ATtinys

Paul MacDougal

7/8/13

ATtiny85

- Low Power AVR® 8-Bit Microcontroller
 - Small package (8-pin)
 - Inexpensive (less than a dollar)
 - Arduino sketch compatible (mostly)
-

ATtiny 85 Pinout (simplified)

		+- \ / -+		
Reset	1		8	Vcc
Pin3	2		7	Pin2
Pin4	3		6	Pin1
GND	4		5	Pin0
		+-----+		

Comparison to ATmega328

Feature	ATmega328	ATtiny85	ATtiny84
Flash	32KB	8KB	8KB
SRAM	2048B	512B	512B
EEPROM	1024B	512B	512B
Pkg pins	28	8	14
Cost*	\$1.608	\$0.72	\$0.768
I/O pins	20 (or 23)	5 (or 6)	11 (or 12)
Analog	6	3 (or 4)	8

* DIP package in qty 100 from Digikey

AVR Programming Methods

- Bootloader
 - Arduino programming w/ IDE via USB
 - High voltage serial program (HVSP)
 - The way to reprogram RESET fuse
 - HVPP, JTAG, PDI, TPI, ...
 - ISP (In System Programming)
 - The topic of this talk
 - Uses SPI pins (SCLK, MISO, MOSI)
-

AVR Programming Methods (cont.)

- In System Programming (ISP)
 - Sparkfun has a programmer for \$48
 - Works with AVR Studio
 - Connects to ICSP header
 - In Circuit Serial Programming

AVR Programming Methods (cont.)

- We want to program bare chips, so we don't have an ICSP header
 - ArduinoISP
 - Arduino board acts as the programmer
 - ArduinoISP sketch
 - Wire up connections to bare chip
 - Sparkfun Tiny ISP Programmer (\$20)
 - ATtiny84 handles USB
 - 8 pin socket for ATtiny85
 - Chipper, Little Wire, and others
-

Connections

Arduino	ATtiny85	Signal
5v	Pkg 8	Vcc
Gnd	Pkg 4	Gnd
Pin 13	Pkg 7	SCLK
Pin 12	Pkg 6	MISO
Pin 11	Pkg 5	MOSI
Pin 10	Pkg 1	Reset
Pin 9		LED - heartbeat
Pin 8		LED - error
Pin 7		LED - program
Reset		10uf Cap to Gnd

Software setup

- Arduino IDE 1.0.5 (some others work)
 - Need to get boards.txt and pins_arduino.h for each chip type
 - You can remove chips from boards.txt for chips you don't expect to use
 - master.zip from github
 - <https://github.com/damellis/attiny>
 - Contents copied to the "right place"
-

Step by step

- Upload ArduinoISP sketch into Arduino
 - Power down
 - Make connections to ATtiny chip
 - Power up (ATtiny will start running)
 - Select proper board via Tools/Board
 - E.g. ATtiny85 internal 1MHz clock
 - Select proper programmer via Tools/Programmer/Arduino as ISP
-

Step by step (cont)

- Upload sketch
 - Note that your program will start running as soon as the programming is finished.
-

Clock frequencies

- ❑ From the factory, ATtiny85 is fused for 1 MHz internal clock.
 - ❑ You can change the fusing to use 8 MHz internal clock by running “Burn Bootloader”. You only need to do this once (per chip).
 - ❑ You can attach an external crystal to run at up to 20 MHz. Select 20 MHz board and run “Burn Bootloader”. I think you need to hook up the crystal before programming.
-

Arduino library support

- ❑ pinMode()
 - ❑ digitalWrite(), digitalRead()
 - ❑ analogRead(), analogWrite()
 - ❑ shiftOut()
 - ❑ pulseIn()
 - ❑ millis()
 - ❑ micros()
 - ❑ delay()
 - ❑ delayMicroseconds()
 - ❑ SoftwareSerial (has been updated in Arduino 1.0)
 - ❑ Not Serial

Backup Slides

Why bother?

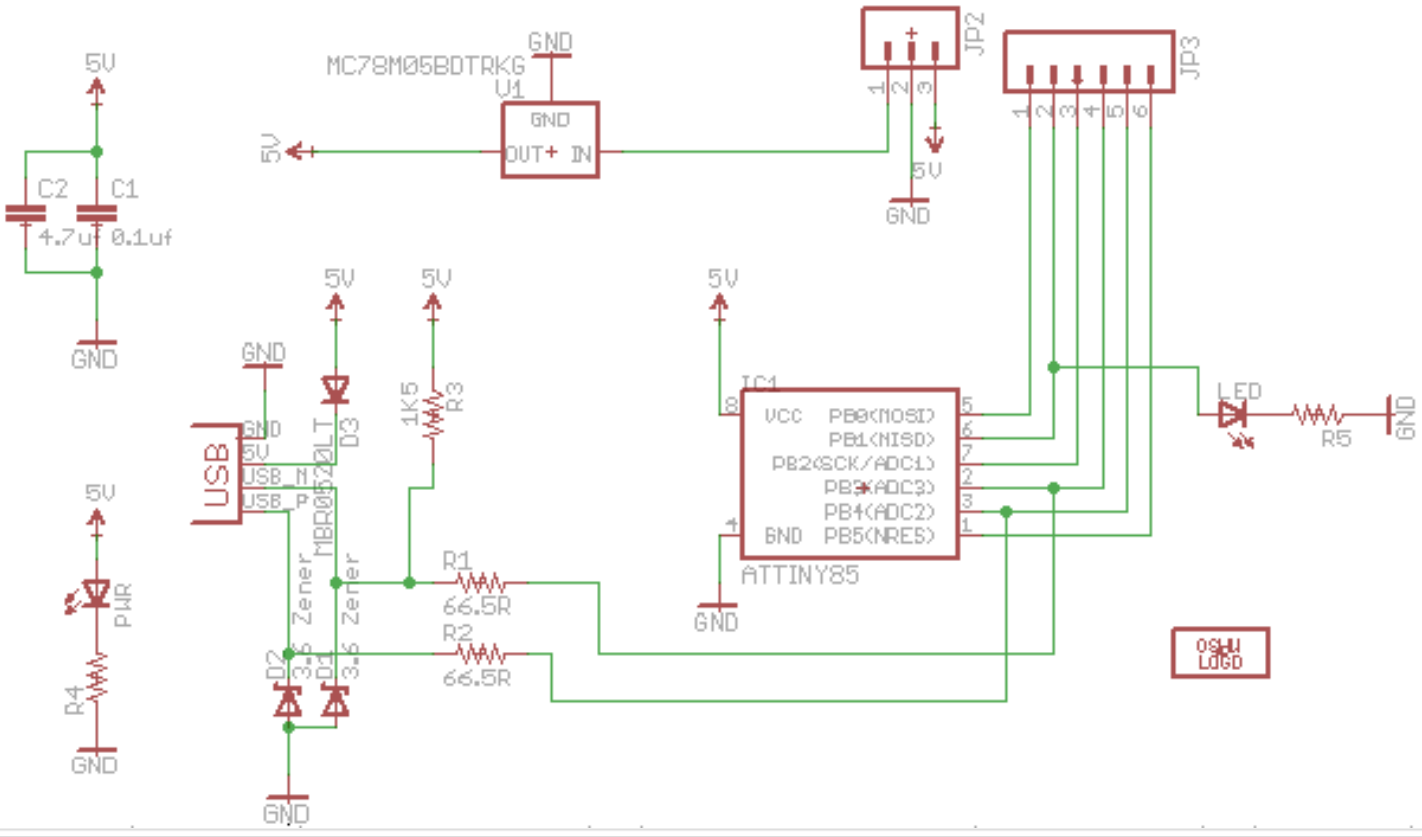

- ↑ Cheaper
 - ↑ Smaller
 - ↑ No xtal or voltage regulator required
 - ↓ Slower (1 or 8MHz)
 - ↓ No USB
 - ↓ Unplug, plug, program, unplug, plug
-

Digispark uses an ATtiny85

- \$8.95
 - 500ma 5V Regulator
 - LEDs
 - 2k bootloader runs USB for 5 seconds before running your code
-

Digispark Schematic

Connections

Arduino	ATtiny84	Signals
5v	Pkg 1	Vcc
Gnd	Pkg 14	Gnd
Pin 13	Pkg 9	SCLK
Pin 12	Pkg 8	MISO
Pin 11	Pkg 7	MOSI
Pin 10	Pkg 4	Reset
Pin 9		LED - heartbeat
Pin 8		LED - error
Pin 7		LED - program
Reset		10uf Cap to Gnd

Connections

Arduino	ATmega328	Signals
5v	Pkg 7	Vcc
Gnd	Pkg 8	Gnd
Pin 13	Pkg 19	SCLK
Pin 12	Pkg 18	MISO
Pin 11	Pkg 17	MOSI
Pin 10	Pkg 1	Reset
Pin 9		LED - heartbeat
Pin 8		LED - error
Pin 7		LED - program
Reset		10uf Cap to Gnd
